

5-Methylfurfural, Natural
Natural Advantage, LLC
www.natadv.com

Natural Advantage introduces **Natural 5-Methylfurfural** (FEMA 2703, CAS 620-02-0). This product can be used for coffee, roasted nuts, honey, caramel, tobacco, and rum. Using 5-Methylfurfural at 0.17ppm, gives a slight spice note almost like cinnamon; this could be used to enhance spice notes. For sweet caramel flavors, try using this product between 10-20ppm. At 20 ppm, 5-Methylfurfural tastes exactly like caramel with a very creamy mouthfeel.

EU and US Natural, Kosher, Non-GMO, Vegetarian
